#### **DETAILED ACTION**

Applicant's election of Group 1 (claims 1-11) and cancellation of claims 12-35 in Paper No. 3 is acknowledged.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1,2,4 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Applicant Admitted Prior Art (AAPA) in view of Inoue et al. (6,443,816 B2).

With respect to claims 1,4, AAPA discloses a method for conditioning a surface of a polishing pad after chemical-mechanical polishing of a semiconductor substrate with the pad surface (18), comprising the following steps: providing a conditioning disk (24); positioning the pad with the pad surface against the conditioning stone and displacing the pad relative to the conditioning stone to rub the pad surface with the condition stone.

AAPA fails to disclose the step of exposing the pad surface to steam

Inoue et al. disclose a steam outlet nozzles (7-1 to 7-4) being configured to jet steam onto the pad surface during the conditioning of the pad (see col. 3, lines 25-51 & fig. 1).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to perform the method of AAPA with steam jet nozzles being

**Art Unit: 3723** 

configured to jet steam onto the pad surface during the conditioning of the pad surface in view of **Inoue et al.** so as to dislodge and remove particulates embedded in the pad. **With respect to claim 2, AAPA** fails to disclose wherein a jet steam is jetted onto the pad surface to impacts the surface with a pressure of from about **10 psig** (24psi) to **20 psig** (34psi).

Inoue et al. disclose a steam outlet port (7-1 to 7-4), the steam outlet port being configured to jet steam onto the pad surface such that the steam impacts the surface with a pressure of from about 0.01 Mpa (1.45 psi) to 0.7 Mpa (101 psi).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide apparatus of AAPA with steam jet nozzles being configured to jet steam onto the pad surface such that the steam impacts the surface with a pressure of from about 0.01 Mpa (1.45 psi) to 0.7 Mpa (101 psi) in view of Inoue et al. so as to dislodge and remove particulates embedded in the pad.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Applicant Admitted Prior Art** (AAPA) in view of **Inoue et al**. as applied to claim 1 above, and further in view of **Nishimura et al**. (6,332,835 B1).

With respect to claim 3, AAPA fails to disclose wherein a steam has a temperature of at least 200° F as it flows through the outlet port.

**Nishimura et al.** disclose a steam that has a temperature of at least 200<sup>0</sup> F as it flows through the outlet port (see col. 9, lines 65-67).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to perform method of **AAPA** with a steam that has a temperature

Art Unit: 3723

of at least 200<sup>0</sup> F as it flows through the outlet port in view of **Nishimura et al**. so as to dislodge and remove particles from the entire surface of the pad.

Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Applicant Admitted Prior Art (AAPA)** in view of **Inoue et al**. as applied to claim 1 above, and further in view of **Lorimer** (6,589,878 B1).

With respect to claim 5, AAPA, fails to disclose wherein the pad has a contaminant associated therewith prior to the conditioning, and wherein a chemical agent suitable for reacting with the contaminant is within the steam during the exposure of the pad surface to the steam.

Lorimer discloses a mixture of steam and ammonia (see col. 5, lines 4-7).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a polishing pad with contaminant associated therewith prior to the conditioning because it is old and well known that a used polishing pad has a contaminant associated therewith prior to the conditioning.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to perform method of **AAPA** with steam comprising a chemical agent, wherein the chemical agent within the steam, reacts with the contaminant during the exposure of the pad surface to the steam in view of Lorimer so as to make sure particulates embedded in the pad are remove completely.

With respect to claims 6,7, AAPA fails to disclose ammonium and ammonium citrate within a steam (see col. 5, lines 4-7).

**Art Unit: 3723** 

material (see page 2, [0003]).

Lorimer discloses a mixture of steam and ammonia but fail to teach ammonium and ammonium citrate within a steam.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide apparatus of **AAPA** with a mixture of steam with ammonia in view of Lorimer so as to remove particle contaminates.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide apparatus of AAPA with ammonium and ammonium citrate within a steam so as to dislodge and remove particles from the entire surface of the pad, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416. See also *Ballas Liquidating Co. v. Allied industries of Kansas, Inc.* (DC Kans) 205 USPQ 331.

With respect to claim 8, AAPA is discussed in claim 6. AAPA also discloses wherein the chemical-mechanical polishing utilizes the pad to polish a copper-containing

Claims 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Applicant Admitted Prior Art (AAPA)** in view of **Inoue et al.** as applied to claim 1 above, and further in view of Brunelli (6,533,647 B1).

With respect to claims 9-11, AAPA fails to disclose wherein the pad is rubbed against a conditioning stone during, prior, and after the exposure to the steam respectively.

**Art Unit: 3723** 

Brunelli discloses a method of planarizing surface of a polishing pad (240) wherein the pad is rubbed against a conditioning disk (250) during, prior, and after an exposure to a steam respectively (see fig. 4).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to perform the method of **AAPA** with conditioning disk wherein the pad is rubbed against the conditioning disk during, prior, and after an exposure to a steam respectively in view of Brunelli so as to dislodge and remove particles from the surface of the pad.

## Response to Amendment

Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Ojini whose telephone number is 703 305 3768. The examiner can normally be reached on 7 to 4 Tuesday-Friday with every other Monday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Hail can be reached on 703 308 2687. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
